

Maintenance and Aftercare for Your Floor

These are the following recommended steps for the maintenance of your floor over time.

Everyday

Use a broom, duster or vacuum to remove any dirt or dust.

General Cleaning

Use warm clean water in a bucket and add Saicos Wash Care as specified. We recommend using a damp, well-wrung mop with this product to clean your floor. Do not use generic floor cleaners as these can break down the top coat.

Three to Six Months

Apply Saicos Wax Care to your floor every 3 to 6 months to provide lasting protection and improvement to the top-coat finish. The product is a gel and is applied neat; a container will typically do around 100sqm.

Five to Ten Years

Eventually the top coat finish will begin to wear, at this point it is recommended to apply another coat of the original top coat finish. Please contact us for more information at the time you are considering undertaking this task.
